

The SpilMax[®] range of absorbents have undergone extensive testing to ensure their absorbency and performance.

SpilMax[®] Oil & Fuel absorbents will absorb a wide variety of plant and seed oils, hydrocarbons, petrochemicals and petroleum-based solvents.

Oil & Fuel Cotton Organic Absorbent Mini Booms are hydrophobic. This means they will repel water, therefore enabling the absorption of oil and fuel without absorbing water itself. Even when fully saturated, they will still float on water.

These mini booms are simple, lightweight, and easy to use. Made from sustainably sourced cotton, they are both biodegradable and organic. Their hydrophobic properties make them perfect for absorbing liquids around water and in wet conditions

Mini booms are typically used to circle or bund leaking drums and machinery or placed between a spill and a stormwater drain.

TESTING:

ASTM Test Method F726-06 “Sorbent Performance of Absorbents” to test maximum oil capacity.
